

Stauf: Dedicated to Innovation and Excellence

Since its inception more than 180 years ago, Stauf Adhesives has been known for its innovation and its commitment to excellence. As a pioneer in creating superior glue from the byproducts of leather tanning in 1828 to the invention of a ready-to-use adhesive that changed the industry in 1952, Stauf's discoveries have established it as a leader in the industry.

Today, Stauf is dedicated to innovation, and to solving problems in a changing environment. The entire adhesive industry continues to benefit from Stauf's leadership, inventiveness and creativity. This leadership has a cost, and Stauf has made bold and intelligent investments in the future. These include continuous research and development, state-of-the-art production and research facilities, and training and education throughout our company.

Stauf's products reflect its ability to meet high standards. With the most advanced adhesive facility in Europe, Stauf is able to create consistency in production that makes quality control a certainty. Advanced computer technology and automation have helped limit costs that are passed on to contractors and retailers. For more than a decade, Stauf Adhesives has been a leading advocate of environmentally friendly building products and of creating an organization that would set clear-cut standards for the industry.

Stauf Adhesives, a 180-year old German-based company, has been concerned about the environment as well as the welfare of its workers and customers for generations. Stauf is proud that its products meet the highest standard (EC1) for integrated consumer and environmental protection. Stauf Adhesives faces the future with a confidence gained after nearly two centuries of innovation and excellence. Those who use Stauf products can share in that confidence.

STAUF is an Industry Leader in Research, Development, and Innovative Solutions to Today's Challenges.
